Chấm điểm của 2,00

Given a list of distinct unsorted integers **nums**.

Your task is to implement a function with following prototype:

```
int minDiffPairs(int* arr, int n);
```

This function identify and return all pairs of elements with the smallest absolute difference among them. If there are multiple pairs that meet this criterion, the function should find and return all of them.

Note: Following libraries are included: iostream, string, algorithm, sstream

**For example:**

Test	Result
<pre>int arr[] = {10, 5, 7, 9, 15, 6, 11, 8, 12, 2}; cout &lt;&lt; minDiffPairs(arr, 10);</pre>	(5, 6), (6, 7), (7, 8), (8, 9), (9, 10), (10, 11), (11, 12)
<pre>int arr[] = {10}; cout &lt;&lt; minDiffPairs(arr, 1);</pre>	
<pre>int arr[] = {10, -1, -150, 200}; cout &lt;&lt; minDiffPairs(arr, 4);</pre>	(-1, 10)

**Answer:** (penalty regime: 0 %)

Reset answer

```
1 | string minDiffPair(int* arr, int n){  
2 |     // STUDENT ANSWER  
3 | }
```
